PRIVATE CONCEPT ENGINEERING INQUIRY / V0.1

HAVEN

BUILDING A NEW OWNERSHIP STANDARD.

OEM architecture · controlled modularity · manufacturing feasibility

Early-stage RFI only; no purchase order, NDA, certified technical package or partner commitment.

WHERE HAVEN STANDS TODAY.

AVAILABLE

Concept exterior and interior design boards; preliminary RFI briefs and cost hypotheses.

NOT YET AVAILABLE

Validated CAD, donor licenses, BOM quotations, certification plan or financed production program.

PARTNER OPPORTUNITY

Help define a credible donor architecture and costed prototype development path.

Phase 0 objective: convert design intent into a priced, engineering-led feasibility package.

SHARED IDENTITY. POTENTIALLY SEPARATE UNDERPINNINGS.

P1 CORE / GASOLINE FWD

Compact sedan donor exploration; standard service parts and modular cabin.

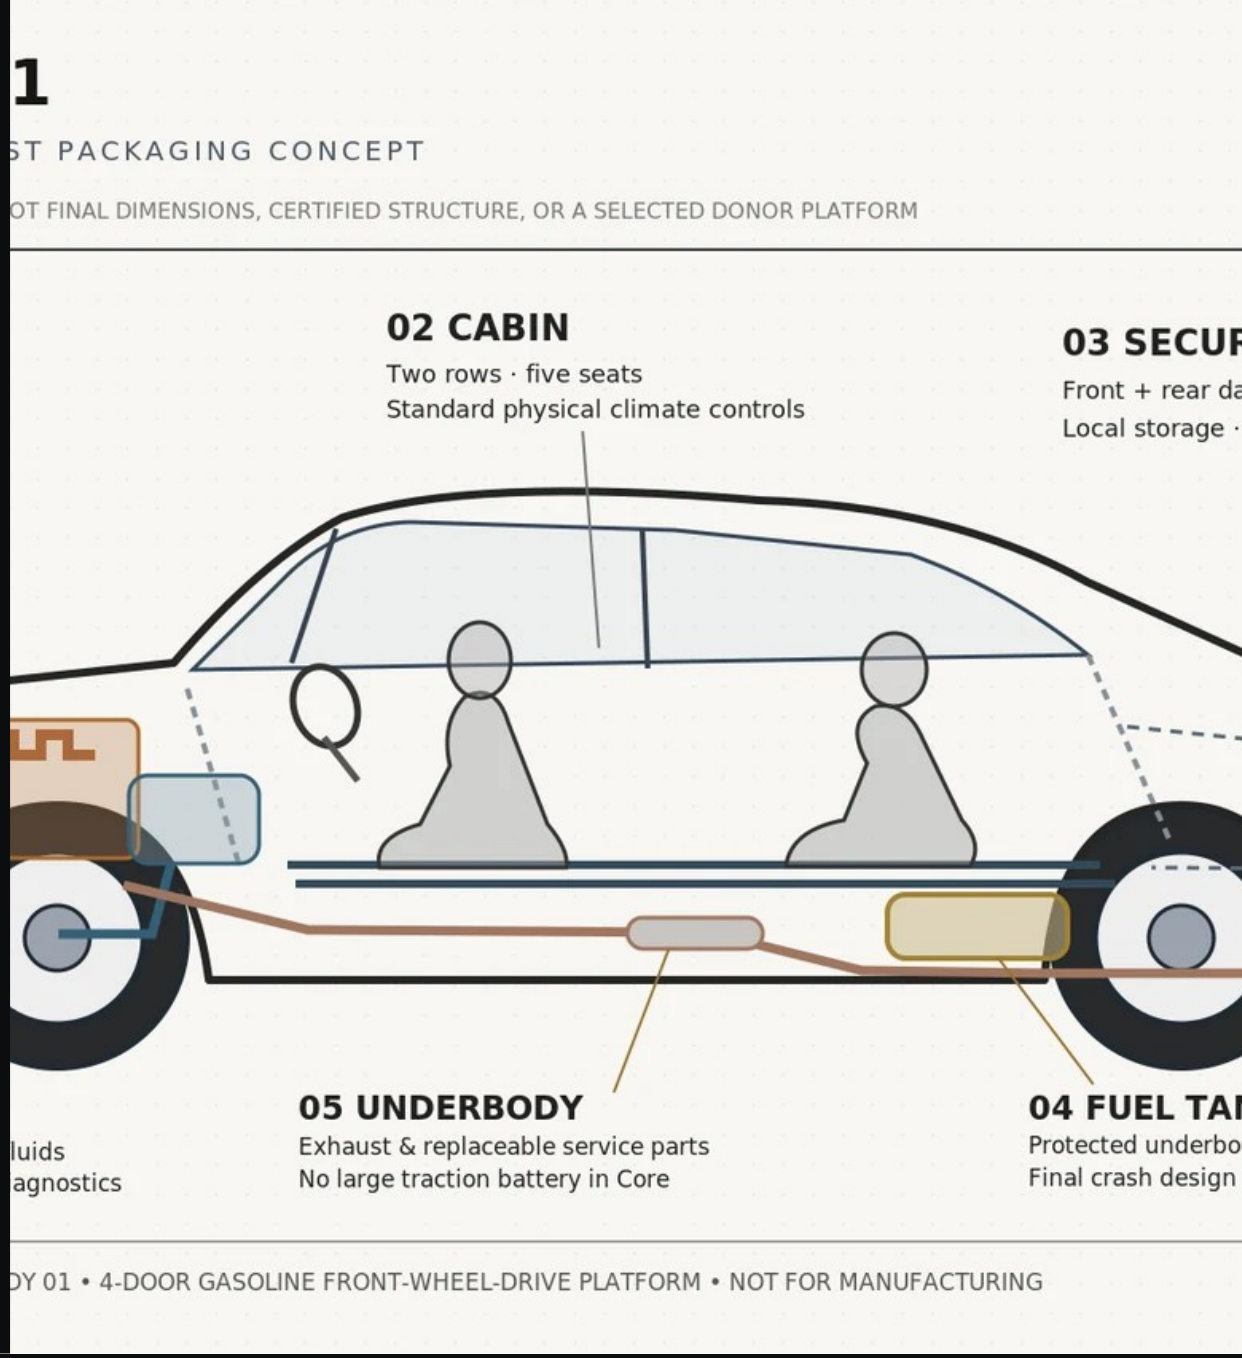

P1R / PERFORMANCE GT

ICE / hybrid / EV trade study; bespoke exterior and luxury interior.

Exterior envelopes are concept sketches, not platform-approved Class-A surfaces.

P1 / PROPOSED ARCHITECTURE

- Existing 4-door unibody donor
- Proven 1.5–2.0L gasoline family
- Carry over restraints / ESC / major hard points
- Develop modular nonstructural interfaces

Illustrated engine, tank and wheel positions not validated. Request hard-point and crash-envelope inputs.

HALO PERFORMANCE WITHOUT A CLEAN-SHEET BILL.

A / DONOR-ICE

High-output, validated four-door performance vehicle; luxury body and cabin adaptation.

B / DONOR-EV

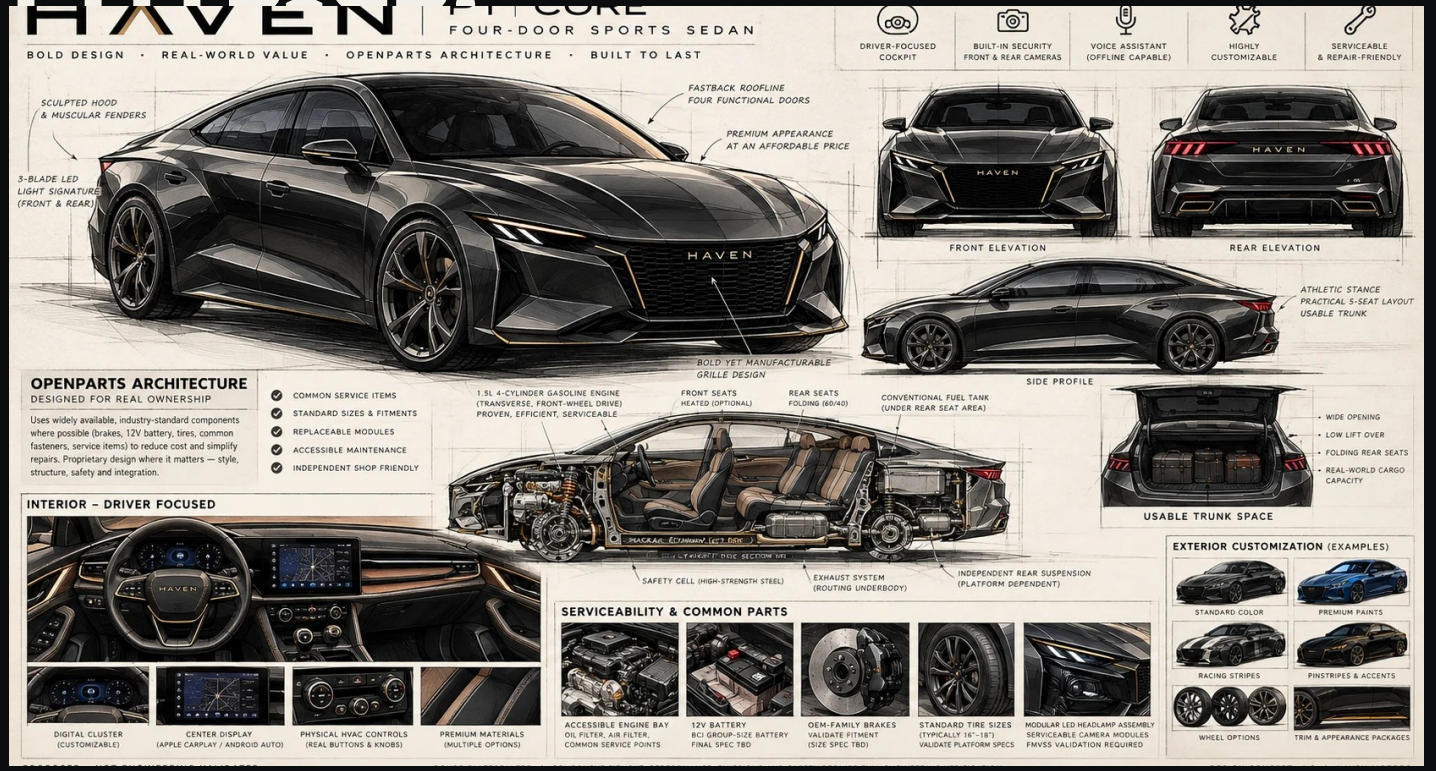

Existing AWD performance EV architecture; reuse motor, pack, control and thermal systems.

C / HYBRID

Performance-hybrid donor only where OEM integration and emissions support are available.

Decision criteria: total cost, available IP, homologation burden, exterior freedom, service rights.

CONCEPT SURFACES NEED PRODUCTION PHYSICS.

NEEDED

Class-A surfaces and hard-point fitting, opening lines, pedestrian and cooling impacts.

OUTPUTS

Dimensional package, master sections, aerodynamics feasibility and costed appearance alternatives.

The visual envelope may change materially once a chassis is selected.

OPENPARTS IS A FITMENT PROGRAM, NOT A PROMISE.

COMMON	Battery sizes / wipers / tire specifications / consumables
VALIDATED OEM FAMILY	Drivetrain service items / brake systems / steering hardware
HAVEN SPECIFIC	Styling surfaces / fascia / signature lamp housings
CONTROLLED	Structural parts / restraints / powertrain ECU / safety gateways

Open automotive service information and traceable part cross-reference rights must be negotiated.

UPGRADEABILITY BEHIND A SECURE GATEWAY.

CABIN ZONE

Media processor
Voice / cameras
Display / audio
Owner-changeable module

SECURE VEHICLE GATEWAY

CONTROL ZONE

ECU / stability
ADAS / braking
Powertrain
Restraints / diagnostics

Interfaces require automotive cybersecurity, EMC and functional safety engineering. Drawing is conceptual.

COST GATES DEFINE THE DESIGN.

P1

Target delivered price $17,990. Current illustrative fully allocated cost $15,100; price feasibility unresolved.

P1R

Target price $129,990. Illustrative low-volume unit cost $125,000; substantial redesign / scale needed.

Request comparable quoting at 1 prototype, 10 units, 250 units, 1,000 units and future high volume.

No supplier has quoted HAVEN; thresholds are negotiation and sensitivity inputs only.

FROM GEOMETRY TO DRIVABLE EVIDENCE.

A	**Feasibility / scan**	Donor envelopes, integration choices, safety review
B	**Design engineering**	Surfaces, packaging, first-pass engineering BOM
C	**Functional mule**	Intact donor drivetrain, cameras, modular cabin
D	**Test / next gate**	Calibration, reliability, costed next-stage proposal

WHAT WE NEED FROM YOU.

- 01 Available donor platforms, licensing rights and commercial constraints
- 02 Preliminary donor dimensional and validation data accessibility
- 03 Engineering scope, schedule, and one-off prototype fee estimate
- 04 Indicative component/tooling/assembly costs at multiple volumes
- 05 Homologation, liability, after-sales and recall responsibilities
- 06 Service data / parts interchange / intellectual property terms

A CONTAINED FIRST ENGAGEMENT.

SCOPE

A 4–6 week paid feasibility package with explicit outputs, assumptions and decision gates.

DELIVERABLES

Architecture shortlist, risk and open-issues register, high-level work breakdown and ROM quote.

GOVERNANCE

Mutual NDA where warranted; milestone acceptance; no public statements without approval.

Interested parties can use this document as a nonbinding discussion brief.

No contract, price, production order, commitment or procurement authority accompanies this deck.

CONTACT / HAVEN FOUNDER CONCEPT STUDIO

LET'S ENGINEER WHAT CAN ACTUALLY SHIP.

A disciplined platform-first, safety-first approach to a vehicle designed for long ownership.

Founder direct-contact details to be supplied before external distribution.
